

# HYDRO DRY

## OFF-LINE FILTERS

### WATER REMOVAL ELEMENTS

The hydro-dry filter elements remove up to 80% of the free water present in the oil.

The hydro-dry elements use the FormulaUFI.H2O filter media, working by absorption and ensuring a high water retention capacity.

To get the maximum water removal efficiency the hydro-dry elements must be used at constant flow rate and low and constant pressure, i.e. the ideal use is in a off-line filter, a low pressure filter, as the FMA series, or in a filtration trolley.

The hydro-dry elements remove also the solid contamination ( $\beta_{21(c)} > 1.000$ ), but we recommend to remove the main part of solid contamination upstream, using a dedicated return-line filter. The hydro-dry elements are available in standard dimensions, to fit standard filter housings.

A clogging indicator set at 130 kPa (1,3 bar) on the filter housing is recommended for proper replacement of the clogged element.

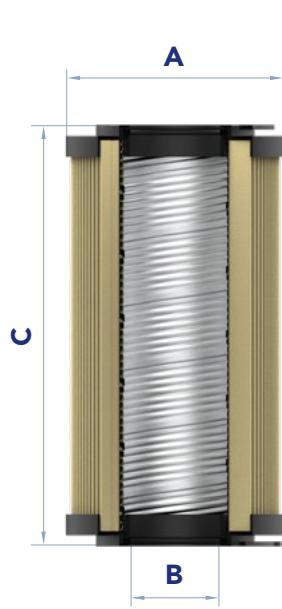

# HYDRO DRY

## OFF-LINE FILTERS

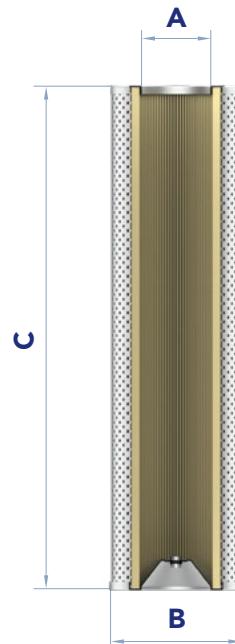

### HYDRO-DRY ELEMENTS ERD SERIES

Fit the FRD series filter housings.

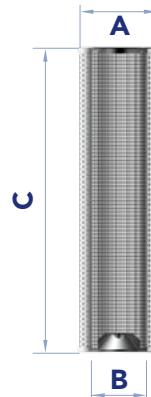

### HYDRO-DRY ELEMENTS ERF SERIES

Fit the FOF series filter housings and the UOW filtration unit

### HYDRO-DRY ELEMENTS IRF SERIES

Fit the UOW filtration unit Green Version

### HYDRO-DRY ELEMENTS EMA SERIES

Fit the FMA series filter housings
